

Commit Review Attestation - Token-2022

Asymmetric Research performed a security review of the changes associated with the pull requests and commits listed in this document as part of its ongoing security engagement with Anza Technology, Inc. The purpose of this document is to acknowledge the scope of code reviewed and provide a record of the relevant changes that were assessed. All feedback submitted by Asymmetric Research as part of this review was addressed. This document does not constitute a full audit report and does not include a complete list of findings, recommendations, or guarantees regarding the absence of vulnerabilities.

Dates: 04/2026 - 05/2026

Reviewed Pull Requests: #818, #857, #883, #884, #911, #912, #913, #914, #921, #922, #923, #924, #927, #931, #933, #959, #996, #1005, #1006, #1018, #1020, #1045, #1051, #1061, #1064, #1067, #1069, #1076, #1090, #1116, #1117, #1137, #1143, #1151, #1156, #1161, #1172, #1187

About us

Asymmetric Research ("AR") is a boutique blockchain security and research firm founded in 2023. AR specializes in offensive security research, embedded security engineering, and high-integrity blockchain infrastructure. The team delivers end-to-end security across smart contracts, infrastructure, and enterprise systems spanning fuzzing, formal verification, internal audits, incident response, ZK, and other specialty security areas. AR's expertise spans multiple blockchain runtimes and languages, with a focus on long-term security partnerships that strengthen and safeguard critical Web3 infrastructure.
